

Huntech 2Man Bivvy Instructions

1. Extend pole
2. Thread pole through the pole sleeve
3. Insert pole in eyelet on nonadjustable side of bivvy
4. Loosen off adjustable strap on opposite side and insert pole into eyelet
5. Attach bottom strap onto the D ring, not the square plastic puller

6. Pull down on adjustable strap (square plastic puller) until the dome will do up. With the strap taking up the tension, not the dome.

7. Peg out enclosed end of bivy and front corners
8. Tie up guy ropes to secure bivy in place.

9. When breaking down your bivy pole after use, please break down into three equal sections and repeat this until completed.
If you break down your pole from either end, section by section, this can over tension and damage the internal elastic cord.
